Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: .an amount of wood. We must give the tree an opportunity of developing a few strong woody shoots, which will only be shortened after the wood has ripened and the leaves have fallen, otherwise the tree will become weakened. To remain in good health and continuously productive, the tree must have a sufficiently large supply of leaves, and these must remain active as long as possible, so as to store up a large amount of food material in the stem. But if every strong shoot is pinched as soon as it exceeds the desired length, and the lateral buds are thus caused to grow out, and if they in their turn have their tips removed, the tree will not have a sufficient supply of well-developed leaves, and a large portion of the food material formed by them will be used up by the developing lateral branches. It must not be forgotten that at the commencement every young shoot draws like a parasite upon the food matter of the older branch; this applies as much to the consumption of water as to the stored-up food material. The need of a strong root or shoot system for a sufficient supply of foliage is often seen in the case of cordon apple-trees. An exceptionally vigorous leafy shoot will suddenly make its appearance, and if removed, will cause the production of a number of vertically growing suckers. Pruning to excess, however, may also be caused by the untimely removal of...
