Automorphic Forms and Shimura Varieties of $PGSp(2)$

By Yuval Z. Flicker

World Scientific Publishing Co Pte Ltd. Hardback. Book Condition: new. BRAND NEW, Automorphic Forms and Shimura Varieties of $PGSp(2)$, Yuval Z. Flicker, The area of automorphic representations is a natural continuation of studies in the 19th and 20th centuries on number theory and modular forms. A guiding principle is a reciprocity law relating infinite dimensional automorphic representations with finite dimensional Galois representations. Simple relations on the Galois side reflect deep relations on the automorphic side, called "liftings." This in-depth book concentrates on an initial example of the lifting, from a rank 2 symplectic group $PGSp(2)$ to $PGL(4)$, reflecting the natural embedding of $Sp(2, \mathbb{C})$ in $SL(4, \mathbb{C})$. It develops the technique of comparing twisted and stabilized trace formulae. It gives a detailed classification of the automorphic and admissible representation of the rank two symplectic $PGSp(2)$ by means of a definition of packets and quasi-packets, using character relations and trace formulae identities. It also shows multiplicity one and rigidity theorems for the discrete spectrum. Applications include the study of the decomposition of the cohomology of an associated Shimura variety, thereby linking Galois representations to geometric automorphic representations. To put these results in a general context, the book concludes with a technical...
